

Cogiscan

* Track Trace Control

Your competitive edge

Traceability

Your Challenge:

Improve product quality, reduce recalls and save money. Achieve higher level of quality control and win more valuable contracts.

Our solution: Traceability

This software saves time and money by improving product quality, while helping EMS providers address growing customer requirements for extensive and accurate traceability data. Cogiscan Traceability is the most cost-effective, scalable and error-proof solution on the market.

The solution can be scaled to trace all materials, components, tooling, processes and test results throughout the entire factory, from material release through final assembly and shipping, to provide a complete as-built history for each product.

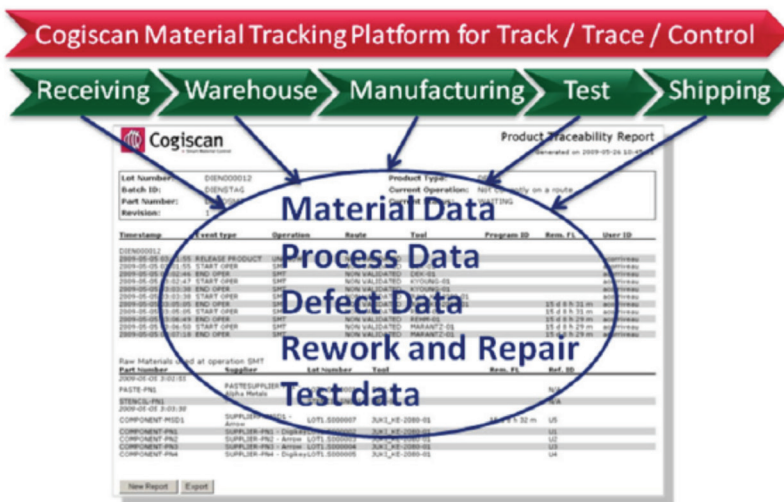

Product quality is improved as Traceability enables quick identification of defective components. By locating the source and supplier of the parts, corrective action is swift. This solution also tracks and validates processes, resources and materials used during the manufacturing process to support continuous improvement goals.

BENEFITS:

- Cost effective, modular, easy and rapid deployment
- Demonstration of process compliance
- Increased end customer satisfaction

KEY FEATURES:

- Scalable to enable full factory traceability, from receiving to shipping
- Easy to use Web reporting interface for standard traceability reports
- Open architecture that enables customers to access the historical database
